| Deforesto |
| IMA |
| |
| Forests are a rich resource of our planet, Earth. Pristine forests provise important to protect our forests. Deforestation refers to loss of forests to ecological and environmental disturbance and imbalance. Forests birds, reptiles and insects inhabit forests. The wildlife species that little the forest. When trees are cut, all the inhabitant creatures suffer. Madepend on the forests for their livelihood. These communities have the forests. They adopt traditional environment-friendly practices maintaining the hydrological cycle in an ecosystem. When forests a enough to be available for man's use for his various requirements species need water bodies, all terrestrial creatures too depend on cycle and climate patterns too. Deforestation therefore |

ide benefits to the ecosystem that a re-created forest cannot create. Therefore it is st cover due to clearing of trees and vegetation in the forest. Deforestation leads are habitats that play host to many wildlife species. A wide variety of animals, we in forests depend on the forests for their food, and complete their life cycle in a too depends on forest products for his food. Communities that live near forests been living near the forests over several generations, and are keen protectors of a. Deforestation therefore affects local communities. Forests are important in the left undisturbed the rainfall patterns are normal. The water table is also high to maintain his life and livelihood. All life forms need water. Not only do marine water for their life. Loss of forest cover leads to disturbances in the hydrological leads to long term ecological disequilibrium and environmental

maintaining the hydrological cycle in an ecosystem. When forests are left undisturbed the rainfall patterns are normal. The water table is also high enough to be available for man's use for his various requirements to maintain his life and livelihood. All life forms need water. Not only do marine species need water bodies, all terrestrial creatures too depend on water for their life. Loss of forest cover leads to disturbances in the hydrological cycle and climate patterns too. Deforestation therefore leads to long term ecological disequilibrium and environmental
